CARE INSTRUCTIONS FOR COPPER & BRASS PRODUCTS

For products in *natural copper/brass* (not varnished):

It is normal for natural copper or brass to naturally age, oxidizing and darkening in time. Fingerprints and small stains, in our vision, are considered acceptable, adding a patina to the products that represents its relation to time and usage.

It is possible to clean and polish the product, to bring it back to the state in which you received it. We suggest using a commercial abrasive product together with a cloth.

For products in *varnished copper*:

These products are protected by a transparent coating varnish, preventing the product to age, oxidize and become darker.

To clean the product do NOT use an abrasive cleaning product, instead use a delicate spray cleaning product or simply water and a soft cloth.
